

Service Description

AppAgile, Managed Service for MariaDB and Maria DB Cluster

1 Introduction

- 1.1 This specific service description complements the service description of AppAgile concerning Managed Service for the product MariaDB
- 1.2 MariaDB is a free, open object-relational database management system (ORDBMS), based on Galera

2 Services provided by Telekom

- 2.1 Telekom provides MariaDB as a service for the customer on his AppAgile platform managed by Telekom.
- 2.2 Managed Service

The Managed Service MariaDB includes following services:

- Administration of operational system parameters.
- Resolution of all operational disruptions out of customers operating area (application level) incl. restore/recovery.
- Changes of existing configurations and technical parameters of the database instance on request (change request).
- Recording and administration of error lists, analysis of the error lists, and rotation of lists.
- Implementation of the Deutsche Telekom Group's security policies.
- Cleansing of logs, check logs, and temporary files of the database instances.
- Monitoring of the database instances regarding system-relevant events and service level.
- Starting and stopping of the database in line with the agreed procedures.
- Administration of the integrated file system and the IP network of the database instances.

2.3 Operating times

- Operating time (uptime) refers to the period of time in which the services are available. Operating times are 24/7 as standard.
- Attended operation time (AOT) refers to the period in which technical support is accessible, and in which faults that may affect system availability are processed. Customers with the Flex and Committed editions can order AOT as OFFICE TIME or FULL TIME.
- Attended operation times for OFFICE TIME are from 8.00 am to 6.00 pm, Monday to Friday, excluding national holidays.
- The attended operation time for FULL TIME is 7 x 24 hours.

2.4 Availability

- The minimum availability of the service is 99,5 percent for the platform as an annual average.

- The availability is calculated from the actual availability in relation to the defined attended operation time (AOT) minus the times for actually performed, planned maintenance and emergency changes.
- The actual availability is measured by the uptime of all Docker containers as well as the existence of corresponding service process.

2.5 Maintenance

- Maintenance work is carried out on a regular basis in order to ensure functionality.
- Periodic database housekeeping.
- Maintenance work which could impair the availability of the cloud service will be announced to the customer at the beginning of the maintenance planning. Standard maintenance windows are not included as unplanned downtimes in calculating the availability.
- Telekom will report any available and security-relevant patches, hotfixes, and new versions of the software used. Telekom will discuss with the customer when to upgrade the Docker container, what different tests will be done on customers' side and the maintenance or change planning. If the customer refuses to upgrade security-relevant patches and hotfixes or versions out of support, Telekom reserves the right to cancel SLAs on this service.

2.6 Backup, recovery and restore

- Backup of database is done on file system level.
- Restore of a database instance, it's protocols and content based on regular snapshots is only possible for whole database.
- A restore has to be ordered and will be provided on best-effort delivery.

2.7 Cluster

- If the customer orders a clustered solution of this service, Telekom will provide the following setup: The image is based on the MariaDB container image from the Red Hat Software Collection 3. It includes the Galera cluster libraries from Red Hat Software Collection used as a WSREP provider in mariaDB to build a multi-master cluster that operates in active-active mode. The minimum usable cluster size is 3 nodes/pods.

2.8 Integration into logging and metrics collection

- If the customer orders additional logging and metrics services by AppAgile, Telekom will integrate all necessary logs and metrics to the central collection services to be accessible by the customer.

3 Optional services

The customer may order the services specified below separately; they are not included in Telekom's standard services. All corresponding services by Telekom shall be billed on a time and materials basis in accordance with the Price Sheet.

- Service instance manual backup.
- Add more cluster nodes/pods.
- Service instance restore on customers demand.
- Administration of operational system, middleware parameters.
- Change of existing configurations and technical parameters of the database instance on request.
- Support in service behavior or performance analysis on customers request.
